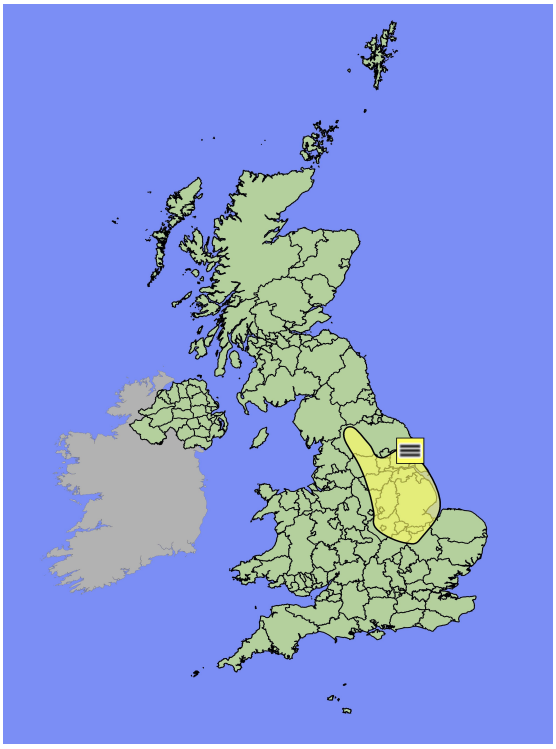
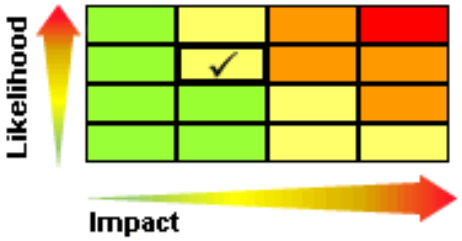
National Severe Weather Warning Service





Chief Forecasters Assessment
Cooling of the slack moist airmass overnight led to the formation of widespread fog over parts of northeast England and the northeast Midlands. However, as cloud layers move in from the south above the fog and a bit more of a breeze develops, the fog should gradually lift this morning and become confined to high ground.

The Met Office have issued a **Yellow Warning** of **Fog**

Valid from **03:00 on Wed, 06th Mar 2013** until **10:00 on Wed, 06th Mar 2013**

Fog will be widespread at first this morning across parts of northeast England and the northeast Midlands and locally dense with visibility less than 100 m in places. However across low lying areas the fog should gradually thin whilst becoming progressively confined to higher ground this morning.
